

Time to do some data collection

- Create a Survey Monkey account.
- Write a five question survey. At least one must be qualitative and one quantitative. Publish and get at least 30 respondents.
- For at least one qualitative & at least one quantitative question:
  - > Create graphs and written descriptions.
  - > Present findings to class.
- For at least one question describe what went wrong with it, giving examples, and how you would fix it.
- See the scoring sheet for how your class will be grading your work.

How appropriate are choices of graph?  
How visible are the answers in the graphs?  
How well are the answers validated by the numbers?  
How well are any "bad" questions explained?  
Would the fixes suggested work?  
Is the presentation interesting?  
Overall appearance of presentation
